

LCBM on January 5th, 2010 in Slovenia:

The University of Maribor established a new portal for Slovenian national TP Artemis; one of the points will be Wikis for building a consensus on State-Of-The-Art and SRA. It was funded and built by I3E staff and will be ready in early December.

We proposed the structure and asked our TP partners for collaboration.

Based on the gathered information, we composed the document representing the TP Artemis members' view on SoA and SRA. Based on this information we organised a consensus-building meeting on January 5th, 2010 where the documents were discussed with the members and approved by them.

The organized Local Consensus Building Meeting took place on January 5th, 2010; and was an integral part of the Slovenian Technology platform on Embedded Systems Artemis in the Chamber of commerce of Slovenia, where Matjaz Colnaric had a presentation of I3E.

Additionally we prepared in our lab a portal for contributions regarding the state of the art, etc. to collect information for SRA (www.tp-artemis.si - in Slovene) which has been presented at that occasion.

We also had discussion on what we need in order to compose a solid SRA with various present stakeholder at this event.

One of the main focal points was the presentation of the new web portal (<http://www.tp-artemis.si/> - for the time being only in Slovene) which has been sponsored by UoM in the framework of I3E. One of its important features is a Wiki page - a questionnaire for gathering the information about platforms used in Slovenia, what is needed by partners and what could additionally be offered. It has been agreed that a workshop about the common platforms and interests will be prepared. Also, wikis for collaborative work on project applications have been prepared.
